The lecture zooms in into South-Eastern and Mediterranean Europe to illustrate the variety of appearances of energy poverty and factors that contribute to it. Furthermore, it will show the differences of energy poverty manifestations within Slovenia, focusing on three different regions. Finally, it will outline three horizontal axes of H2020 project *EmpowerMed*: gender, health and summertime energy poverty, illustrating but just a few aspects of the multifaceted effects of energy poverty, by showing that there are some underlying systemic factors, leading to energy poverty, that need to be tackled.
